

# PLANTER CADDY

*Built By Farmers... For Farmers*

COMBINE YOUR  
TILLING AND  
PLANTING  
OPERATIONS AND  
SAVE TIME, FUEL  
AND MONEY

CADDY RAISES HIGH AND WHEELS  
MOVE FORWARD REDUCING TONGUE  
WEIGHT

MOUNT TWO TOOLBARS AT THE SAME TIME WITH THE  
IMPLEMENT CADDY FOR PERFECT ALIGNMENT

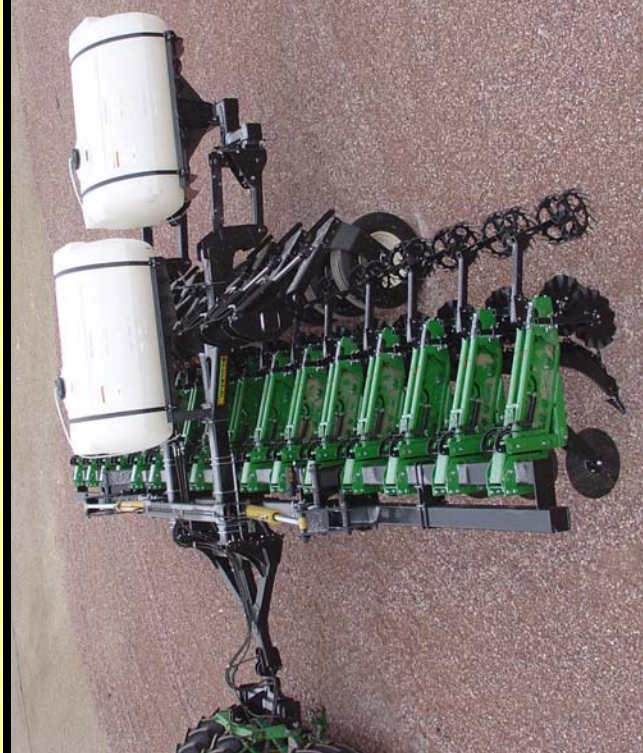

The Planter caddy comes with either a pull type hitch or a three point hitch either way it allows for quick and short turns . The wheels tuck under to make the machine turn sharper. Then they move rearward to transfer weight to the tractor for better traction. This also raises the machines high in the air for better mobility.

Rear tools mount via a quick attach bracket (left photo) for easy change of implements. Shown above are a heavy packer (middle photo) on one machine and a planter (right photo) on the other. The bracket does not interfere with three point operation when the tool is removed. The rear implement can float up and down on parallel linkage and therefore does affect the implement's weight when used on the Planter Caddy.

Carry two implements and fertilizer or you can carry massive fertilizer loads.
